Recall & Review

Module 0: Foundations

By the End of Today, You'll Be Able To…

Retrieve

This week's vocabulary and commands, unprompted

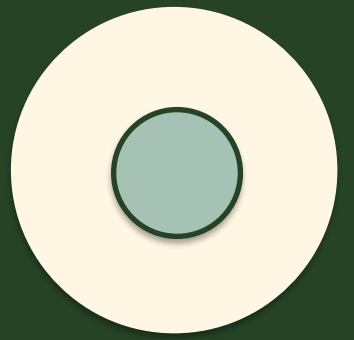

Explain

Out loud, why each one matters for the project

WELCOME BACK

Today’s Format

No new content. Today is about proving what you already know still holds up without a safety net.

Today: No New Material

Pure retrieval

Practice on this week

Quick-fire

Low stakes, high energy

Ask anytime

No pressure

QUICK CHALLENGE

Is a birthdate a data type or a data structure?

A

Data structure

B

Data type

ANSWER KEY

Data Type vs. Data Structure

Data type

A single birthdate is one value of one type (a date), not multiple values organized together.

QUICK CHALLENGE

Which git command shows your repo's current state, completely safely?

A

git push

B

git commit

C

git status

ANSWER KEY

Git Status

git status

git status is read-only: safe to run constantly, any time you're unsure what's going on.

QUICK CHALLENGE

What's the difference between a data type and a data structure?

A

They're the same thing

B

A type is one value's kind; a structure organizes many values

ANSWER KEY

Data Type vs. Data Structure

A type is one value's kind; a structure organizes many values

That's this module's own definition, said back in the room's own words. That retrieval is the goal today.

QUICK CHALLENGE

You ran git commit -m "fix bug", but git status still lists the file as modified. What happened?

A. Forgot to run git add first

B. The commit message was too short

C. Needs git push before it counts

ANSWER KEY

Git Commit Debugging

Forgot to run git add first

git commit only saves what's staged. A change never added to staging never made it into the snapshot, so git status still sees it as unstaged.

WOULD YOU RATHER?

Would You Rather…

From memory

Guess the command

Look it up

Get it right the first time

No wrong answer: looking things up is a real professional skill.

NO WRONG ANSWER

Code Along: Type It From Memory

Talking about whether you'd guess or look it up is easy. Doing it cold is the real test.

Type It From Memory

bash

```
# from memory, no notes: initialize a repo,
# create a file, stage it, and check status
$ git init
$ echo "# Recall Practice" > README.md
$ git add README.md
$ git status
```

Navigate From Memory

bash

```
# from memory: print where you are, list
# what's here, and move into a folder
$ pwd
$ ls
$ cd modules
```

QUICK CHALLENGE

What does the -m flag do in git commit -m "..."?

A

Merges two branches

B

Lets you write the commit message inline

C

Deletes the last commit

ANSWER KEY

Git Commit -m Flag

Lets you write the commit message inline

Without -m, git opens a text editor for the message instead. -m is the fast, inline way.

QUICK CHALLENGE

Which git command shows exactly what changed, line by line, since your last commit?

A

git log

B

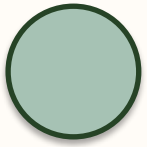

git diff

C

git status

ANSWER KEY

Git Diff

git status

WHICH files changed

git diff

WHAT changed, line by line

Both are useful because they answer different questions.

TURN AND TALK

Explain why version control is important in building data projects and products.

THINK

Take a moment to form your own answer.

PAIR

Compare your reasoning with a partner.

SHARE

Bring one idea back to the room.

TURN AND TALK

A company wants to price a new item. What data would they look at first, and would you expect it to be structured or unstructured?

THINK

Take a moment to form your own answer.

PAIR

Compare your reasoning with a partner.

SHARE

Bring one idea back to the room.

TURN AND TALK

How would you approach an analysis when you don't have all the data you need?

THINK

Take a moment to form your own answer.

PAIR

Compare your reasoning with a partner.

SHARE

Bring one idea back to the room.

TURN AND TALK

Which of this week's habits do you think you'll actually keep doing without being told to?

THINK

Take a moment to form your own answer.

PAIR

Compare your reasoning with a partner.

SHARE

Bring one idea back to the room.

QUICK CHALLENGE

What's the very first command you run in a brand-new project folder?

A

git commit

B

git init

C

git push

ANSWER KEY

Git Init

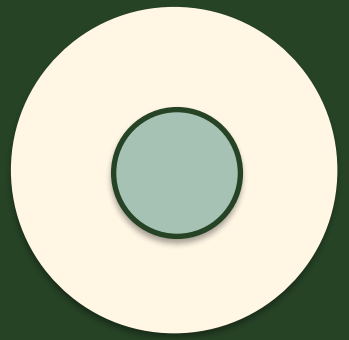

git init

git init starts tracking a folder. Nothing else in the sequence works until this runs first.

RETRIEVAL PRACTICE

Wrapping Up

Recalling this cold, without notes, is exactly what an interview or a teammate may ask of you later.

Heading Into Next Week

This week

Your vocabulary and commands are solid now.

Next class

AI literacy: a new judgment.

Before Next Class

Prepare

Nothing new to prepare.
Rest up.

Next class

AI literacy. New content resumes.
